

Create a design and implementation plan for OUD service delivery

Although access to opioid use disorder (OUD) services in prisons and jails is growing, many correctional facilities are looking for support in their efforts to provide medications for OUD (MOUDs). A design and implementation plan for Medicaid reentry waiver OUD services, especially MOUD, could be helpful for states in describing relevant service models, staffing, and resource needs.

In 2019

63% of local jails screened for OUDs at intake

A horizontal bar chart with a green segment representing 19% of the total. The bar is outlined in blue.

19% started any medication-assisted treatment (MAT) for individuals found to have an OUD

A horizontal bar chart with a green segment representing 24% of the total. The bar is outlined in blue.

24% of local jails continued MAT for individuals in custody

A horizontal bar chart with a green segment representing 25% of the total. The bar is outlined in blue.

25% provided naloxone to individuals upon release

Create a design and implementation plan

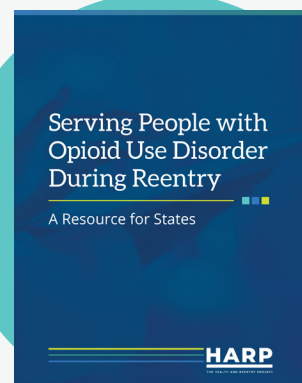

Follow these steps to create a plan that's tailored to facilities' needs and context:

- 1 Engage key stakeholders to provide input on and review your approach and to support implementation
- 2 Analyze each facility's capacity for delivering required services directly or through partners and identify community resources that could support continuity of care
- 3 Provide a guide to help facilities assess administrative and clinical capacity
- 4 Evaluate staffing requirements and options to determine the best fit for each service
- 5 Determine which MOUDs are available locally or by telehealth
- 6 Establish a set of clinical standards for MAT
- 7 Establish confidentiality and privacy policies regarding OUD services and information sharing

Ready to start your plan for OUD service delivery for individuals under your Medicaid Section 1115 reentry waiver?
